

Sumeet Singh

Application Security Enthusiast studying Computer Science. In my day to day, I would ideally contribute to maturing a program by integrating security best practices in the SDLC and enabling engineers to take ownership of their applications' security posture, all while enabling businesses to shift left security.

EXPERIENCE

theCoderSchool, Cerritos, CA — Code Coach/Instructor

MARCH 2022 - AUGUST 2022 (5 Months)

- Developed and led engaging curriculums to teach several computer programming languages, such as Python and C++ for 100+ students ages 7-18.
- Planned and individually led programming workshops for nearby schools, with more than 50+ students per week, resulting in 20+ new students at our center.
- Lead coach for multiple summer camps teaching 25+ students how to create their own Roblox games in Roblox Studio using Lua.
- Mentored students to develop problem-solving, communication, teamwork, and leadership skills.

EDUCATION

California State University, Fullerton — B.S. Computer Science

AUGUST 2019 - MAY 2024 GPA: 3.44

Coursework:

- Web Application Security: Covering topics such as secure coding practices, threat modeling, vulnerability management, and risk assessment, to develop a strong understanding of the practices necessary for securing web applications.
- Cloud Computing & Security: Practicing technologies designed to protect cloud-based systems, data, and infrastructure from unauthorized access, theft, or damage.
- Data Structures & Algorithms, Computer Architecture & Assembly Language, Database Systems, Operating Systems, Cryptography, Artificial Intelligence, C++ | C# | Java | Python Programming, Linux Operating System, Software Process, and Software Engineering.

PROJECTS

Zombie Runner

An endless runner genre web browser game created with the Unity Game Engine using C#. This game was created for a Software Engineering course by a group of 4 including myself and we implemented GitHub to collaborate and merge our branches together throughout the entire development process.

Data Analysis on Product Sales

This project provides meaningful insights from 100,000+ electronic product sales using data with tools such as Python Pandas and Matplotlib within Jupyter Notebook. The data required obtaining, extracting, and cleaning before using it to solve real business problems.

Markov Chain Prediction Models

Used Markov Chain for producing stochastic models based on linear algebra to predict the probability of a sequence of events occurring based on the most recent event. These three models include predicting weather conditions, freeway routes, and customer loyalty for businesses.

La Palma, CA 90623

SKILLS

Languages: Python, Java, C++, C#

IDEs: Eclipse, Visual Studio, PyCharm

CI/CD: Git/GitHub

Operating Systems: Linux, Windows, macOS

Databases: MySQL/PopSQL

Libraries: Pandas, NumPy, Matplotlib

Web App Security: Burp Suite, OWASP ZAP, Snypk, AWS WAF

Capture the Flag: picoCTF, TryHackMe

Able to explain OWASP Top 10 in detail

Experience in creating GUI applications using Windows Forms App with C#'s .NET Framework in Visual Studio

STRENGTHS

Effective Oral and Written Communicator

Can Engage with Audiences of Varying Technical Aptitude

Can Work with Partners in a Constructive Manner

CERTIFICATES

- AWS – [Certified Cloud Practitioner](#)

- We Hack Purple – [Application Security Foundations Level 1](#)

- We Hack Purple – [Application Security Foundations Level 2](#)

- We Hack Purple – [Application Security Foundations Level 3](#)

- We Hack Purple – [Secure Coding Course](#)
